The Senators announce partnership with Pygraphics inc.

5 November 2006

The Senators Drum and Bugle Corps from Eastleigh, Hampshire are pleased to announce a strategic partnership with **Pygraphics inc.**, the makers of Pyware 3D Java.

Pyware 3D Java is the premier drill design product on the market and the most widely used package available.

The Senators have used the Pyware product in drill designs since 2001 when one of our staff purchased the original Pyware 3D program; we had found it an excellent aid in creating innovative visual designs, coupled with the ability to print off member co-ordinates.

As the Corps moved forward and we experimented with different areas of visual performance including Indoor Percussion we felt the time was right to re-evaluate our drill design capabilities.

Pygraphics were very supportive and have provided Craig Sherratt, the Senators Visual Designer and Caption Head, with the latest version of the software, which is Pyware 3D Java version 4.0, together with the innovative "Pyware Performance Simulator and March Pad".

The Simulator and March Pad accurately evaluates and scores members' ability to keep strict tempo and perform all steps offs of every new direction change as they march their individual part with the step off method used by many high schools and drum corps.

Dustin Merrell of **Pygraphics** commented *"The Senators are at the cutting edge of visual design in Europe as their results continually show, we were very impressed with the work ethic and enthusiasm shown and we are very happy to support such a fine organisation"*.

For more information on **Pyware 3D Java** please contact Craig Sherratt
